

ABSTRACT

Disclosed is a process of making images or other data from an image capturing device or other data capturing device or a combination thereof available to one or more authorized user, the capturing device having an electronically readable device
5 serial number and cellular Internet communication capability, and (a) providing use information specifying said one or more authorized user of said images or other data, (b) capturing said images or other data and (c) accessing a cellular service provider (CSP) or a personal communications service provider (PCSP) with said cellular Internet communication capability for initiating the transmitting of said
10 images or other data to a service provider associated with said device serial number, the process comprising said CSP or PCSP transmitting said prepared images or other data to an application service provider (ASP) associated with said device serial number to enable said ASP to associate said device serial number and said use information to provide to said set of authorized users said images or other data.
